

# We're going Green with gas.

The Gas Company makes synthetic natural gas (SNG) for our utility customers from a byproduct of petroleum refining. Our process utilizes recycled waste water to produce hydrogen, a renewable component, which accounts for about 5% of the SNG produced. Additionally, we capture a portion of the greenhouse gas (CO<sub>2</sub>) that is released and deliver it for use as dry ice and for others like algae producers to encourage plant growth.

We are in process of developing other sources of gas, such as biomethane, a renewable gas, from animal or vegetable oil sources and from landfill waste, to add to our utility gas, further increasing its renewable content.

We intend to grow the renewable/sustainable portion of our utility gas to as much as 50% by 2015, helping Hawaii meet its goals for renewable energy, and helping our entire world community.

Cooking and heating and drying with gas makes the most sense. Gas is cleaner — less than 40% of the carbon output of electricity for the same tasks. Gas is cheaper — less than the cost of electricity for the same tasks. Gas is reliable — when the lights go out, the gas stays on. Next to the sun itself, gas is the best source of heat energy in and for Hawaii.

**We mean business — and satisfaction.**  
**THE GAS COMPANY**

Service throughout Oahu, Hawaii, Maui, Kauai, Molokai and Lanai. For more information email [info@hawaiigas.com](mailto:info@hawaiigas.com) and we will get right back to help you succeed with gas. Or call 808-535-5933. [www.hawaiigas.com](http://www.hawaiigas.com)
