

**HAWAII GAS**  
THE CLEAN ENERGY COMPANY

# New Installation Checklist

Steps for contractors prior to scheduling your gas service turn-on.  
Please contact your Hawai'i Gas representative for questions.

## Commerical Customers

- Is the exhaust hood directly over appliances with nozzles installed?
- Is the fire suppression system installed and ready for activation?
- Is the 2nd stage regulator installed?
- Are all appliance regulators installed, if required?
- Are all appliances connected with individual shut-off valves?
- Are all in-line service valves open?
- Is 2nd stage regulator vented with steel pipe or equipped a vent limiter?
- Is water heater vented properly?
- Are all gas equipment converted to operate on proper fuel?
- Are all unused connecting points secured with plugs?

## Residential Customers

- Are all appliance regulators installed?
- Are all appliances connected with individual shut-off valves?
- Are all in-line service valves open?
- Are water heater(s) vented properly?
- Are all gas equipment converted to operate on proper fuel?
- Are all unused connecting points secured with plugs?

### Did You Know?

Using gas energy directly in appliances is **three times** more efficient than electricity. Efficiency saves energy and money.

Gas energy produces **50 percent less CO2 than coal and 30 percent less CO2 than fuel oil**, both of which are used to generate the majority of electricity in Hawai'i.
